ACKNOWLEDGEMENTS

The following acknowledgement was inadvertently omitted from the paper "A reclassification of bombardier beetles and a taxonomic revision of the North and Middle American species (Carabidae: Brachinida)" *Quaest. ent.*, 1970, 6(1): 4-215. Field and museum work was supported by grants to George E. Ball from the National Research Council of Canada (NRC A-1399) and National Science Foundation (GB-3312). Publication was financed by the National Research Council grant.

T. L. Erwin

CORRIGENDA:

Quaest. ent. 6(2) 1970:

P. 223, line 4 after the Abstract: "Some bees (i.e. bumblebees) range to the Arctic and High Arctic, in North America to Ellesmere Island for instance (Hocking and Sharplin, 1964)."

P. 225, line 19 (from top): "Exploitation of favorable microclimates, the short favorable summer, and an efficient resting stage for overwintering, probably allow the wasps to cope with these severe conditions (see also Fuller, 1969; Hocking and Sharplin, 1965)."

P. 242, last line: ". . . as some bees (i.e. bumblebees) do (and even the High Arctic: Hocking and Sharplin, 1964)."
